

Stack Parker D61 EV

Before lowering the platform, the vehicle parked in the lower parking space must be driven off.

Garage with door in front of the car parking system

Notes

- 1 For dividing walls: cutting through 10 x 10 cm (for pipes).
- 2 Dimensions A1, A2 and A3 must be coordinated with the door supplier.
- 3 If the total height is greater, the max. vehicle height for the upper parking space increases accordingly.
- 4 Potential equalization from foundation grounding connection to system.
- 5 10 cm wide yellow-black marking must be applied by the customer to the edge of the platform in the access area to mark the danger zone in front of the supporting surface of the upper platform edge (see »Load Plan«, Page 3).

240	500	20	40
250	520	20	40

Driveway in accordance with local regulations

*= standard width (parking space width 2.30 m)

Please note:

End parking spaces are generally more difficult to drive into. Therefore, we recommend our wider platforms for end parking spaces. Parking larger vehicles on standard width platforms may make getting into and out of the vehicle difficult. This depends on the type of the vehicle, approach and above all, on the driver's skill.

- Description

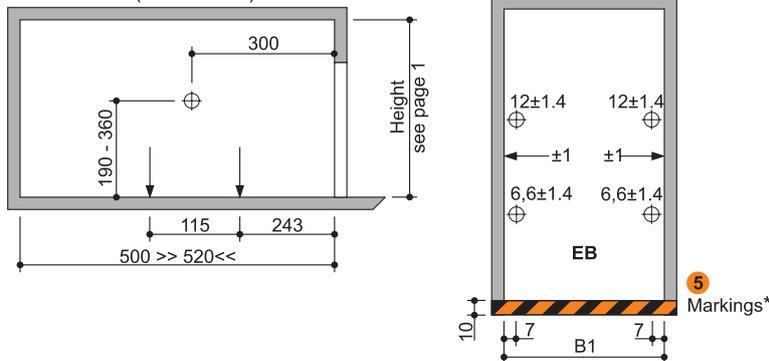

Approach

! The illustrated maximum approach angles must not be exceeded. Incorrect approach angles will cause serious maneuvering and positioning problems on the parking system for which the local agency of KLAUS Multiparking accepts no responsibility.

Load plan

Forces in kN (static loads)

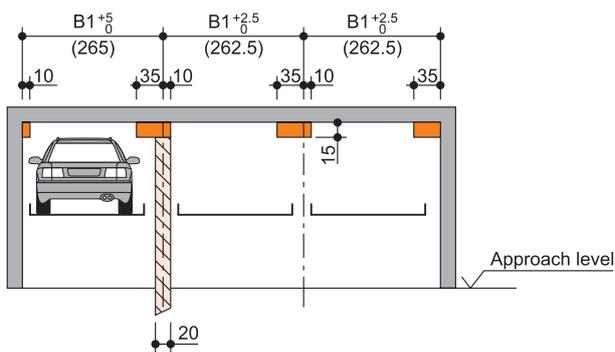

! Units are doweled to the floor.
Drilling depth: approx. 9 cm to 15 cm. Floor and walls are to be made of concrete (quality minimum C20/25).

* = Colors used in this illustration are representative

Special foundations are required with asphalt floor or paving blocks.

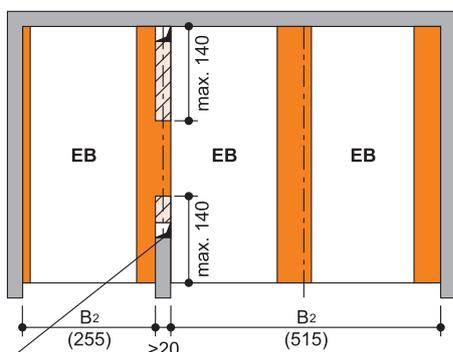

Installation data

Free space for longitudinal and vertical ducts (e.g. ventilation)

B₁, B₂ = (See table on page 2)

- Free space for vertical pipelines, ventilation branch canals
- Free space for horizontal ducting

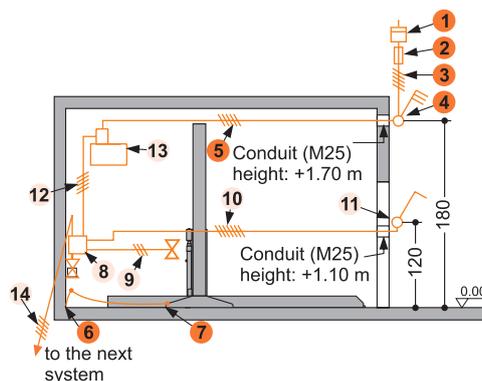

Example for ventilation branch canal and/or vertical pipelines.

Free space only applicable if vehicle is parked forwards = FRONT FIRST and driver's door on the right side

() = Dimensions in brackets illustrate an example for usable platform width 230 cm.

Electrical installation

Installation diagram

Electrical data (to be performed by the customer)

No.	Quantity	Description	Position	Frequency
1	1	Electrical meter	in the supply line	
2	1	N.A.		
3	1	Power supply line (5 x 2.5 mm ² , copper 3 PH + N + PE) with marked wire and protective conductor.	from electrical meter to main power point	1 per unit
4	1	Main power point: 4 pole RCBO (or MCB + ELCB), 16 Amp IDN (sensitivity/leakage current) 100 mA	defined at plan evaluation near to hydraulic unit	1 per unit
5	1	Power supply line (5 x 2.5 mm ² , copper 3 PH + N + PE) with marked wire and protective conductor.	from main power point to hydraulic unit	1 per unit
6	every 10 m	Foundation earth connector	corner pit floor	
7	1	Equipotential bonding from foundation earth connector to the system		1 per system

Electrical data (included in delivery of KLAUS Multiparking)

No.	Description
8	Terminal box
9	Control line 3 x 0.75 mm ² (PH + N + PE)
10	Control line 5 x 0.75 mm ² with marked wire and protective conductor
11	Operating device
12	Control line 5 x 0.75 mm ² with marked wire and protective conductor
13	Hydraulic unit 1.5/3.0 kW, three-phase current, 415 V / 50 Hz
14	Control line 5 x 0.75 mm ² with marked wire and protective conductor

Technical data

Range of application

Generally parking system is suitable for small/big length car for which the system is adjusted at the time of installation. In case of different car is to be parked, system adjustment/confirmation from KLAUS Multiparking shall be required.

Environmental conditions

Environmental conditions for the area of multiparking systems: Temperature range 5°C to +40°C. Maximum outside temperature of +45°C.

If the local circumstances differ from the above, please contact KLAUS Multiparking.

To be performed by the customer

Safety fences

Any constraints that may be necessary in order to provide protection, for pathways directly in front, next to or behind the unit. This is also, valid during construction.

Numbering of parking spaces

Consecutive numbering of parking spaces.

Building services

- Lighting, ventilation, fire extinguishing and fire alarm systems.
- Signages for parking guidance, flooring, pedestals, site painting.

Marking

The marking that identifies the danger area at entrance of parking platform should be made on the floor, with yellow and black stripes.

Wall cutting

Any necessary wall cutting according to page 1.

Electrical supply to the main power point

3 phase, 415 V (±10%) 50 Hz (±2%) 4 wire (3 PH + N + PE) electrical supply to the main power point and the control wire line (5 x 2.5 mm², copper 3 PH + N + PE) with marked wire and protective conductor must be provided by customer during installation.

Railings

If there are traffic routes next to or behind the installations, railings must be installed by the customer. Railings must also be in place during construction.

Description

General description

This system provides dependent parking spaces for 2 cars one on top of the other. The lower vehicle is parked directly on the floor. The vehicle parked on the bottom must be driven out before lowering the platform.

The upper vehicle is parked on the platform when it is resting on the floor with the wheels touching the wheel stopper-cross member.

The user is responsible for proper positioning of the vehicle on platform/floor.

Operation via operating device with hold-to-run-device using master keys.

The operating elements are usually mounted either in front of the column or on the outside of the door frame.

Operating instructions are attached to each operator's box stand.

For garages with doors at the front of the parking system, the special dimensional requirements have to be taken into account.

Multiparking systems consist of

- 2 steel pillars with base plates (mounted on the floor)
- 2 sliding platforms (mounted on to the steel pillars with sliding bearings)
- 1 platform
- 1 mechanical synchronization control system (to ensure synchronous operation of the hydraulic cylinders while lowering and lifting the platform)
- 1 hydraulic cylinder
- 1 automatic hydraulic safety valve (prevents accidental lowering of the platform)
- Connecting elements, bolts, nuts, etc.

Platforms consist of

- Platform base sections
- Wheel-stop
- Access strip
- Side members
- Bolts, nuts, washers, distance tubes, etc.

Hydraulic system consists of

- Hydraulic cylinders
- Solenoid valves
- Hydraulic pipes
- Hydraulic pipe fittings
- High-pressure hoses

Electric system consists of

- Operating device (Emergency Stop, lock, 1 master key per parking space)
- Terminal box at wall valve
- Electromagnetic locking device

Hydraulic unit consists of

- Hydraulic power unit (low-noise, installed onto a console with a metal mounting)
- Hydraulic oil reservoir
- Oil filling
- Internal geared wheel pump
- 3-phase-AC-motor (3.0 kW / 415 V, 50 Hz)
- Contactor (with thermal over current relay and control fuse)
- Pressure gauge
- Pressure relief valve
- Hydraulic hoses

We reserve the right to change these specifications without prior notice.

KLAUS Multiparking reserves the right in the course of the technical progress to use newer or other technologies, system, processes, procedures or standards in the fulfillment of their obligations other than those originally offered.
